

STARTING WITH PYTHON

1

DOWNLOAD PYTHON

- Navigate to: <https://www.python.org/downloads/>
- Download the latest version (it should automatically determine your OS)
- Navigate to the folder where the file was downloaded.
- Double click on the file and follow the instructions.
- Now, you should have Python set up on your computer.

TERMINAL

2

- Type **Terminal** on the search tool of your computer.
- You should see a window pop up, type **python3 --version**
- The output should match the version you just downloaded.
- If so, then you successfully set up Python.

3

PYCHARM

- Navigate to: <https://www.jetbrains.com/pycharm/>
- Choose your operating system.
- Download the **Community** version.
- Navigate to the folder where the file was downloaded.
- Double click on the file and follow the instructions.
- You should have PyCharm as one of your applications now.

DISCORD SERVER

4

- Create an account on Discord: <https://discord.com/>
*if you don't have one
- Join our server by using the link: <https://discord.gg/d5x7Ga3V/>
- Explore the channels within the server
- Feel free to introduce yourself on the **#general** channel

questions 

The **Discord Server** will be the place where you can:

- interact with other students
- ask general questions
- ask questions related to homework and other material
- view and download the resources
